The present peptide

sequence is HPL inhibiting VHH

fragment,

HPL

#14 from

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human brings.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAE10563 standard; peptide; 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         llama
                 The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes.
                                                                                                                                                                        New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                                                                                                                                                                                                                                                                     14-MAR-2000; 2000EP-00200930
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-FEB-2001; 2001EP-00200703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-SEP-2001.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #10 from llama (camelid) species

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #16 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devo of light chains.

immunoglobulin naturally devoid

WPI; 2001-572718/65.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 130 AA;
